

Autopilot Control System

OVERVIEW

Supported as major Tier 1 aerospace provider as a contract manufacturer for an advanced autopilot control system, transitioning the product into a controlled, scalable production environment while meeting strict aerospace performance and compliance requirements.

PRECISION MANUFACTURING & TEST INTEGRATION

- Advanced the product from engineering development into stable, repeatable production execution
- Implemented disciplined manufacturing methods and rigorous quality assurance processes aligned to aerospace standards
- Partnered on design optimization efforts to improve producibility and reduce variation
- Engineered a fully automated test and calibration platform to ensure accuracy and repeatability
- Embedded automated test systems directly into the production line to increase throughput and traceability
